

User Story for Interplanetary Video Conferencing Application

1. As an Astronomer, I need a visual communication to the team so that I can communicate with them with an effective interaction to provide the information related to the present situation and the project.
2. As a Scientist, I need to connect group of people in the video conference so that I can exchange the important details and information about the discovering facts to the team to work efficiently for the outcome.
3. As a Technician, I need responsive functionalities of desktop sharing and recording so that I can share the important insights and information related to the project and also recording the video conference for future analysis of data.
4. As an Astronaut, I need to share important files during the conference so that I can update and validate the information.
5. As an IT specialist, I need to secure and protect the channel of communication so that I can support the system for the confidential and important information for every project separately.
